

EDUCATION

Bachelor of Computer Engineering, Major in Game Technology

Electronic Engineering Polytechnic Institute of Surabaya (2020 - 2024)
GPA 3.67 (Cumlaude)

TECH STACK

Languages

- C++, Python, JavaScript (Node.js)

Backend & Data

- Node.js, Redis, Jupyter Notebook

DevOps & Infrastructure

- Docker, Dokploy, Proxmox, Linux

Engines

- Unity (C#), Unreal (C++ / Blueprint)

KENAN FIRMANSYAH

BACKEND & SOFTWARE DEVELOPER

Software developer with hands-on experience in backend services, self-hosted infrastructure, and applied data work. Builds with Node.js and Redis on the backend, runs Proxmox and Docker for personal infra, and uses Python with Jupyter for research and applied ML.

EXPERIENCE

Game Developer

Agate | 2026 Feb - 2026 May

- Built systems for an unannounced title at Agate, one of Indonesia's largest game studios.

Apple Developer Academy @ BINUS (Alum)

2025 Feb - 2025 Dec, Bali

- 10-month program in product engineering: API design, networking, and prototyping, working with mixed teams of designers and developers.

Lead Developer (Unreal Engine, C++)

Starpixel Studios | 2024 Oct - 2025 April

- Owned the multiplayer networking stack for a real-time horror title.
- Wrote C++ where Blueprint couldn't keep up. Managed builds, bug tracking, and internal docs week to week.

Data Scientist (Intern)

PT. eBdesk | 2023, 6 months

- Built Python pipelines for scraping and analysis using Selenium, Gephi, Tableau, and Jupyter.

SELECTED PROJECTS & ADDITIONAL WORK

1 BACKEND, INFRASTRUCTURE & TOOLING

Home Server (Personal Infrastructure)

2023 Oct - 2023 Dec | Proxmox, Docker, Linux

- Ran a self-hosted server doing triple duty as NAS, database, and compute.
- Proxmox handled virtualization, Linux guests ran the workloads, Docker held the services.

Findect — iOS Backend Developer

Apple Developer Academy cohort project | 2025 | Team of 6

- Built the backend for an LLM-powered networking app; handled matching and discovery on the server side.

Agreely — Freelance Platform & Software House (On-going)

Web / App stack, team of 3

- Building a freelance-marketplace platform with a team of three. Full-stack engineering plus ops.

Paid — Sport Split Bill

Apple Developer Academy cohort project | 2025 | 8+ weeks, team of 3

- iOS app that helps organizers split costs for recurring group activities; built the backend that handles the splits and reconciles balances.

2 APPLIED RESEARCH & DATA

Five peer-reviewed papers in IEEE Access, IJIES, ICVR, and TCCE: adaptive audio systems, Q-Learning with fuzzy logic for dynamic difficulty, and context-aware recommenders. Most of the work was Python in Jupyter, with C++ inside Unreal for the eval setups. *F1 up to 0.71. +35% session length on the DDA paper.*

3 SHIPPED SOFTWARE & GAMES

Saturated — shipped to Mac App Store on Apple Silicon. Programmer and PM at JoyBait Studio.

Milky Ice Jump — shipped to iOS App Store. Freelance iOS port plus ad integration.

Xanthous — thesis project at EEPIS. AI-driven VR horror in Unreal, 2023-2024.

9+ Game Jams in Unity and Unreal, with Photon for multiplayer. Recurring roles: gameplay programming, AI, and solo dev.
